

# Technical Writing Week1 Homework 2

- reflection of what you want to achieve from this course.

[ Sohee Kim – 20220344 ]

By this course, I want to achieve many things about English. This is my first time taking a lecture in English 100%. So, I expected to improve my English reading and writing, and also conversation skill. Also, all lectures in Kentech will be all English, so taking this course will help me a lot to take other lectures understand. Afterwards, I might write paper in English but I haven't written it before. When I learn how, it will be much easier then. Not only in English, in Korean, too.

Also, I am not really interested in writing because I haven't done it before many times. But when I write these writing things every week, I am expected to be interested in writing. I really want to write well, but I had no chance to learn about it, and this is first time to learn how to write paragraph, mail or etc. It will be very helpful for me to spend my graduate school life because during graduate school, I should write a lot of papers and mails. So, I decided to take this course in the first semester. I look forward to seeing my improved English skills

In addition, I want to get to know other students who are not on the same track as me. There is no opportunity to know other track students. But in this course, it is able to introduce and discuss about each other with other students. I think it is very good chance to make many friends and also, we can create opportunities to study together later. I think we will be able to share the fields we are researching and gain a lot of knowledge in the future. And I am going to Kentech for 5 years in here, Naju, so it will be good to make friends who live neighbor because I don't have any friends in this city. I want to make friends from this course and talk about daily life and also research.

Actually, I don't have specific goal yet. My track is Energy AI, and my interest is not defined. I have to find a lot of things about field, and decide what I want to research about. After I decide what to research, I want to be expert about that field and study for it during life. I could work for a company, or I can be a researcher. I want to study with all possibilities open without limiting any one.

My research will be about energy, but energy is very difficult field to study because it is a serious international problem and will not be resolved easily. So, I think studying about energy will be greatest challenge for me to reach my research life. I think there will be many other difficulties to reach my research life. But from now on, I will continue to work hard to achieve my goal, study more hard and find out.
